Advantages of OneTaq[®] DNA Polymerase Enzymes

- Blend of Taq and Deep Vent, optimized for robust amplification across the broadest range of templates
- Fidelity is twice that of Taq DNA Polymerase
- Little or no optimization is required to achieve high yields

Advantages of OneTaq's aptamer-based hot start technology

- Room temperature reaction set-up
- No separate activation incubation required
- Value pricing
- Polymerase retains high specific activity

Advantages of OneTaq[®] Buffers

- Formulated to enable robust amplification across a broad range of GC/AT content
- Buffer chart enables simple selection of the correct buffer
- High GC Enhancer enables amplification even of amplicons with very high GC content
- Mg-free buffer options are also available

*OneTaq products are supplied with OneTaq Standard Reaction Buffer and OneTaq GC Reaction Buffer. The GC reaction buffer was used to amplify the targets shown in the table. For other products, amplification reactions were conducted both with and without GC enhancers (if provided).

The figure exemplifies the superior performance, in this case with high GC amplicons, of OneTaq DNA Polymerase versus two leading non-hot start “enhanced” Taq polymerases. Yield is shown.
